## ¿Back-end vs Front-end?

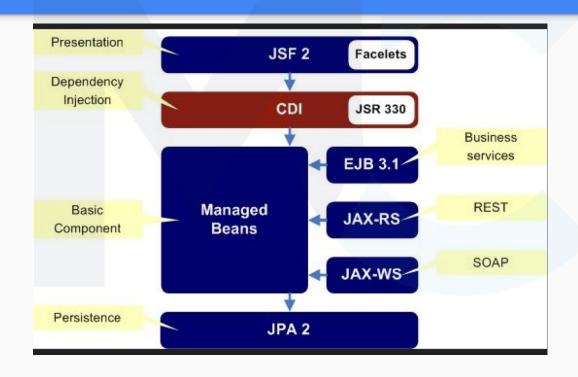

## Hablemos de Java (Java EE | Jakarta)

## Hablemos de Java (Java EE | Jakarta)

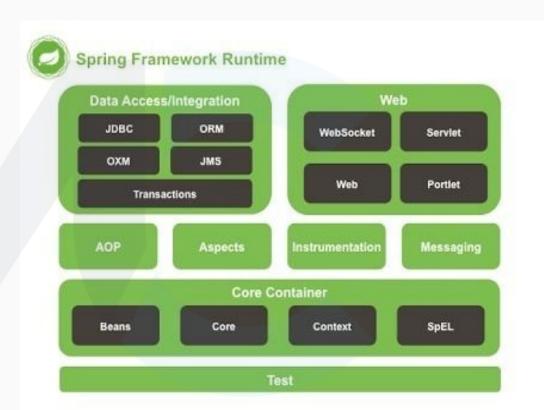

## Hablemos de Spring

### Spring Framework

### **Spring Projects**

### Main Projects

From configuration to security, web apps to big data - whatever the infrastructure needs of your application may be, there is a Sprin Project to help you build it. Start small and use just what you need - Spring is modular by design.

### SPRING IO PLATFORM

Provides a cohesive, versioned platform for building modern applications. It is a modular, enterprise-grade distribution that delivers a curated set of dependencies.

### SPRING BOOT

Takes an opinionated view of building Spring applications and gets you up and running as quickly as possible.

### SPRING FRAMEWORK

Provides core support for dependency injection, transaction management, web apps, data access, messaging and more.

### SPRING CLOUD DATA FLOW

An orchestration service for composable data microservice applications on modern runtimes.

#### SPRING CLOUD

Provides a set of tools for common patterns in distributed systems. Useful for building and deploying microservices.

### SPRING DATA

Provides a consistent approach to data access - relational, nonrelational, map-reduce, and beyond.

#### SPRING INTEGRATION

Supports the well-known Enterprise Integration Patterns via lightweight messaging and declarative adapters.

#### SPRING BATCH

Simplifies and optimizes the work of processing high-volume batch operations.

#### SPRING SECURITY

Protects your application with comprehensive and extensible authentication and authorization support.

### Comparativa

### Java EE vs. Spring Framework Features/APIs

<sup>\*</sup> Similar patterns for validation, remoting, security, scheduling, XML binding, JMX, JCA, JavaMail, caching

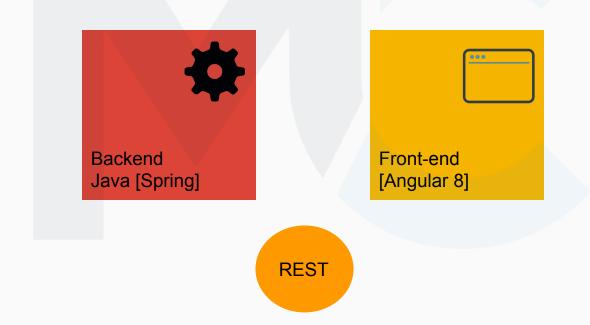

<sup>\*</sup> Spring also supports EJB 3.1, but not CDI

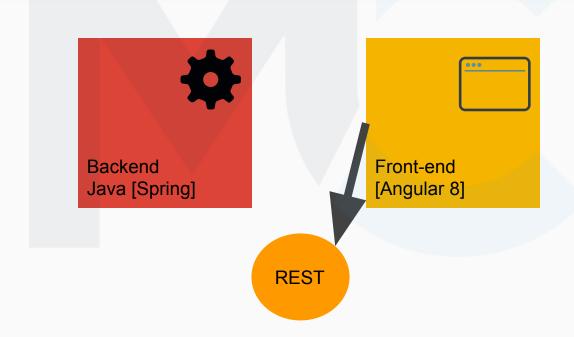

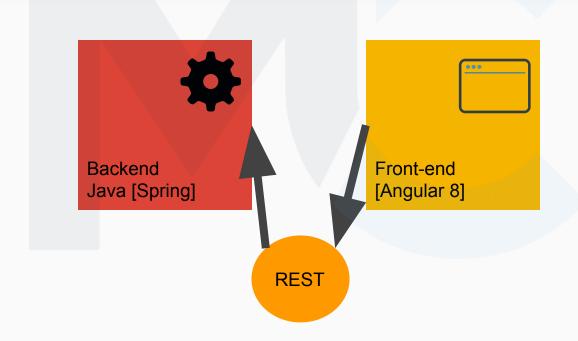

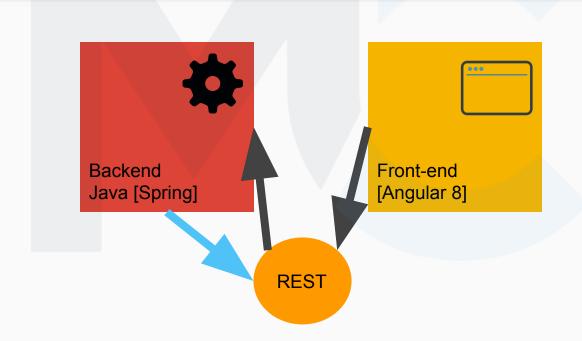

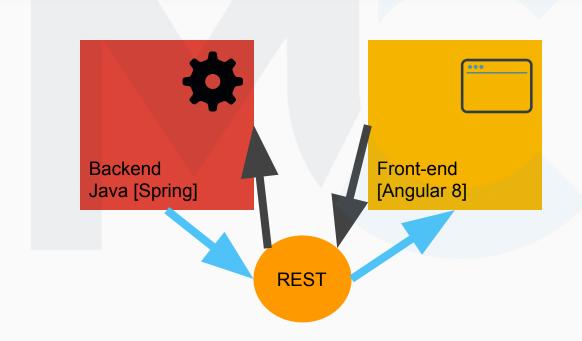

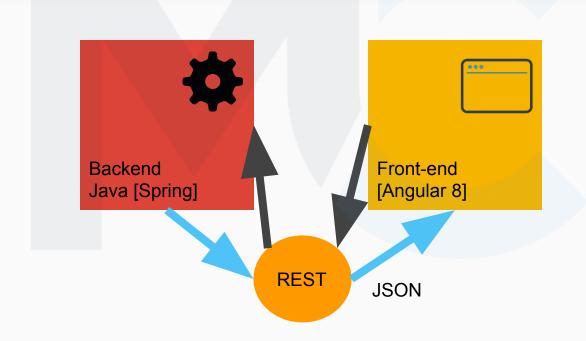

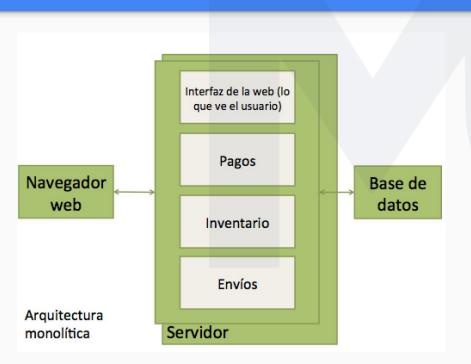

## Objetivos del curso

- Crear un backend con Spring [Boot]
  - Servicios REST
  - Protección por JWT
  - Spring Data JPA Repository
  - JSON
  - Enfoque Monolítico
  - Enfoque Microservicios
- Crear un frontend con Angular 8
  - Angular Material
  - Seguridad y comunicación con servicios
- Puesta en producción., despliegue en DigitalOcean

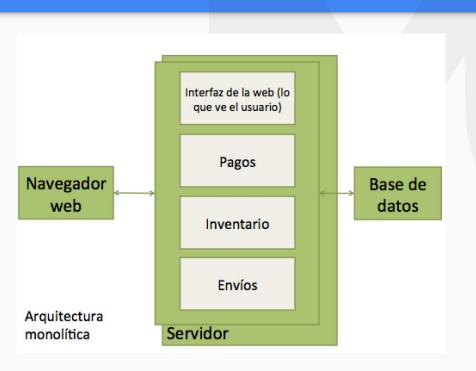

## Arquitectura 1 [Monolito]

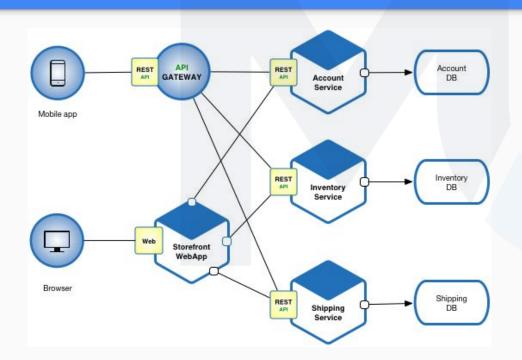

## Arquitectura 1 [Monolito]

- Simple desarrollo
- Simple de probar
- Simple de desplegar
- Simple de escalar

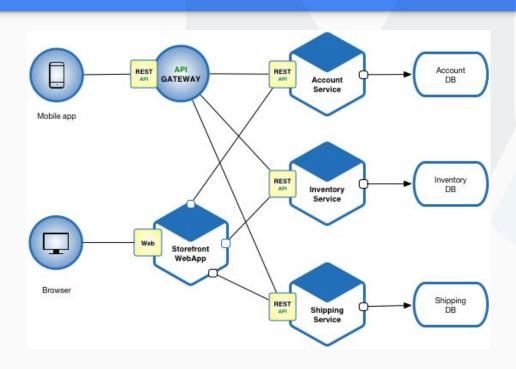

## Arquitectura 2 [Microservicios]

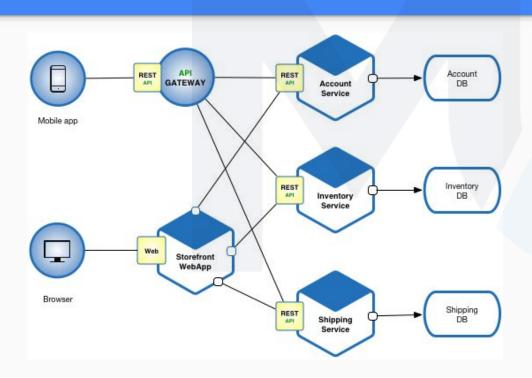

## Arquitectura 2 [Microservicios] - Ventajas

- Simple mantenimiento
- Equipo multi-lenguaje (diversidad tecnológica)
- Desarrollos en paralelo

## Arquitectura 2 [Microservicios] - Desventajas

- Complejidad de configuración
- Complejidad de seguridad
- Complejidad de gestionar errores
